

FS Engineer (Course TÜV Rheinland) SIS training New based on IEC61511 edition 2.0

GM International is pleased to recommend the Functional Safety Engineer (TÜV Rheinland) vocational **Training for Safety Instrumented System Professionals**, presented by world wide renowned Functional Safety Expert, **Tino Vande Capelle**.

COURSE OBJECTIVES

The main objective is to provide all engineers involved in safety instrumented systems with elementary and necessary knowledge about functional safety, based on the leading international functional safety standards IEC 61508 and IEC 61511. A second objective is to give anybody attending the course the opportunity to have his or her functional safety competency confirmed by the TÜV Rheinland upon successfully passing the exam.

Improve your Functional Safety competency

WHY SHOULD YOU ATTEND?

IEC61511 ed2.0 released in February 2016, clearly indicates as a 'Normative' requirement:

- That anybody involved in safety lifecycle activities **shall** be competent to carry out the activities for which they are accountable.
- That a procedure **shall** be in place to manage competence of all those involved in the SIS life cycle.
- That a periodic assessments **shall** be carried out to document the competence of individuals against the activities they are performing and on change of an individual within a role.

Take advantage of this course, examination and certification to prove your clients, peers and management, your competency in the field of Functional Safety.

Success in the final examination certifies your functional safety knowledge on your personal name, adding a great value to your professional career and image.

FS Engineer (Course TÜV Rheinland) SIS training New based on IEC61511 edition 2.0

COURSE PROVIDER

Tino Vande Capelle (www.tinovc.com):

Tino is providing 'INDEPENDENT' Functional Safety (FS) Consultancy as freelance & self-employed. Capitalizing on his 30+ years of process safety sector experience, offers a unique and practical approach of the IEC 61508:2010 & IEC61511:2016 FS standards in the industry.

Tino has trained Functional Safety for more than 2500+ engineers in 150 different classes worldwide and still counting.

Tino is a Senior FS Expert (TÜV Rheinland, ID#109/05) & Trainer for Safety Instrumented Systems (SIS) of the TÜV Rheinland Functional Safety Program as an accepted course provider. He joined the program from the first year in 2005 and is currently number 2 on the list of all trainers on the TÜV Rheinland website.

COURSE INFORMATION

- **Course dates:** 16-19 June
- **Course location:** Bucharest or Ploiesti - Romania
- **Course exam date:** One day after the course
- **Course language:** English
- **Duration:** 3 days + 4 hours exam

PREREQUISITES

In accordance with the FS Engineer (TÜV Rheinland) Program:

- Minimum 3 years experience in the field of functional safety.
- University degree (Master's or Bachelor's degree in Engineering) or equivalent engineer level responsibilities status certified by employer.

FEES

Please contact us for detailed information about fees.
The price includes:

- Course material, GM International SIL manual and SIL informative poster.
- Registration fees and certificate of attendance
- Upon successful completion of the exam a FS Engineer (TÜV Rheinland) certificate and a listing on the TÜV Rheinland website
- Refreshments and lunch for 4 days.

The training course contains both theoretical instructions and practical exercises.

CONTACTS AND REGISTRATION

The registration form is downloadable at
www.gminternational.com/?p=training

The form is to be filled and sent email to:
training@gminternational.com

Registration is valid only upon receipt of registration form and payment.

For more detailed information or any other question please contact:

Mrs. Annalisa Consonni

Telephone: +39 039 23 25 038

E-mail: training@gminternational.com

FS Engineer (Course TÜV Rheinland) SIS training New based on IEC61511 edition 2.0

EXAM - RULES AND REGULATIONS

The applicant has to attend the 3 consecutive days training course given by TinoVC.

The Eligibility Requirements forms must be completed, signed and supported with the necessary documents (University degree or statement letter from employer).

The maximum duration of the exam is 4 hours.

There are 85 questions:

- 60 Multiple Choice questions to be answered by selecting A-B-C or D. Only 1 will be the most complete and correct answer. Every good answer will be 1 point. (There are no negative points for wrong answers).
- 25 Open Questions to be answered in a written form. Every single question can score anything between 0 and 1 (There are no negative points for wrong answers).

The passing criteria is 75%, so you need minimum 63.75 points in able to pass the exam.

All exams are monitored by TÜV Rheinland, which will issue the successful participants their personal certificate.

What you will need:

- A pen or pencil / eraser - both are acceptable.
- A bilingual English-..... dictionary is allowed, but not a must.
- You do not need a calculator to complete this exam.

What is absolutely forbidden:

- Mobile telephone.
- Photo/video - camera or 'any' recording enabled devices.
- Course manual, notes or summaries.

Re-Exam:

The retake needs to take place within max 1 calendar year from the first exam date without re-following the complete training again. You are free to choose a location in one of the upcoming TinoVC trainings currently released on both the TinoVC website (www.tinovc.com) & TÜV Rheinland website (www.tuvasi.com).

You will need to register at least 4 weeks before the event is due in able to comply with the administration regulations, and pay for TUV certification fee.

After 1 calendar year from the first exam, a complete course (and fee) will be obliged again.

FS Engineer (Course TÜV Rheinland) SIS training

New based on IEC61511 edition 2.0

FS TRAINING PROGRAM

Introduction to Functional Safety

- Modern history of disasters
- What is safety?
- Legal status IEC61511
- Overview of legal requirements
- Layers of protection
- Safety Instrumented System
- Safety Integrity Level
- Problems with safety systems
- Safety system failures
- What is Functional Safety?
- Functional Safety Standards

Management of Functional Safety

- Lifecycle concept 61508/61511
- Functional Safety Management
- Competency
- Risk evaluation and management
- Safety Planning
- Implementation and monitoring
- Functional Safety Assessment
- Functional Safety Audit
- SIS configuration management

Planning the Safety System

- Safety lifecycle structure/planning
- FS management system
- Verification & Validation plan
- Safety Requirement Specification

Verification & Application Program

- Verification planning
- Verification testing
- Application program verification

Process Hazard & Risk Assessment

- Hazard & Risk definition
- Tolerable risk and ALARP
- Risk management
- Hazard Identification Techniques, FMEA, FTA, HAZOP
- Hazard Analysis Techniques, ETA, dispersion modeling, bowtie
- Hazard Analysis Techniques ETA
- Risk Reduction Techniques, risk matrix, risk graph,

- Security Risk Assessment, digital mapping, Security Levels, Security Assurance Levels, Foundational Requirements

Allocation Safety Function to layers

- Layer Of Protection Analysis LOPA
- Typical IPL characteristics
- LOPA working example
- LOPA pros and cons
- LOPA CCPS books references
- SIF operating modes and Safety Integrity Requirements

Safety Requirement Specifications

- SRS general requirements
- SIF description requirements
- MTTR-MRT, etc
- Application Program SRS

SIS Design and Engineering, AP development

- General requirements H/W
- Safety Manual as per IEC61508
- Hardware concepts
- IEC61511 SIF - mode of operation
- Safety - vs Process - HFT
- Diagnostics - vs Proof - test
- IEC61508 Safe Failure Fraction
- Architectural constraints Route 2H - Route 1H
- Selection of devices/field devices
- Maintenance and testing requirements
- Quantification of Random Failures
- Three barriers to clear to claim SIL
- General requirements AP
- Application Program (AP) design
- V-model lifecycle documentation
- AP implementation
- AP verification and testing
- AP methodology and tools

Installation, Commissioning and Validation

- Installation plan and documentation

- Activities, procedures and techniques
- Validation FAT - SAT

Operation and Maintenance

- Planning operation/maintenance
- Procedures operation/maintenance
- Bypass - MOS
- Proof test procedure for every SIF
- Training for operators/maintenance personnel

Modification

- Modification objectives
- Input needed
- Change vs Modification
- Before you start modification
- During modification
- After modification
- FSA before you begin

Decommissioning

- Procedures, analysis and authorisation
- SIF requirements

Wrap up

- Summary
- Exam preparation

Student exercises

- With the student exercises, the participants will have the opportunity to put the learned theory into practice
- Failure classification
- Hazard and risk analysis (FMEA, FTA & HAZOP)
- Selecting the appropriate SIL
- Safety versus HFT
- Design a Safety Integrity Function
- Define device level safety functions
- Selection and comparing devices
- Accident documentary (video)
- Questions & Answers
